THE PROBLEM

Healthcare information is scattered everywhere

Patients juggle six disconnected sources just to understand their own care.

Hospital Visits

Lab Reports

Prescriptions

Emails

Paper Notes

Patient Confusion

Patients see one system for hospital visits, another for labs, a pharmacy app for prescriptions, email for referrals, and a drawer of paper notes for everything else. Nothing talks to anything else — so patients arrive at every appointment starting from zero.

Healthcare needs an AI-powered companion

The gap isn't more data — it's someone to make sense of it, with you.

73%

of patients forget key details
between appointments

4.2

disconnected apps used, on
average, to manage one condition

2x

better outcomes when patients
arrive prepared and informed

Rihla+ sits above the fragmented healthcare stack — pulling records, reports, and conversations into one AI-guided timeline, so patients always know what happened, what's next, and what to ask.

Introducing Rihla+

One companion. Every step of the health journey.

Mission

Give every patient a calm, intelligent companion that turns scattered health information into clarity.

Vision

A world where no one walks into a doctor's office confused about their own health story.

Meet Adam

A fictional patient, living with recurring migraines.

Adam, 34

Marketing Manager

Adam has lived with recurring migraines for three years. He's seen two GPs and a neurologist, has a folder of unread lab PDFs, and can never quite remember what changed since his last visit.

*"I don't need another app.
I need someone to remember
this with me."*

Migraine flares up

Visits neurologist

Gets lab results

Opens Rihla+ to make sense of it all

From symptom to solution

A single guided path — no dead ends, no lost information.

LIVE PRODUCT WALKTHROUGH

Nine screens, one connected experience.

Core Features

Everything a patient needs, nothing they don't.

Health Timeline

Every visit, result, and note in one chronological, searchable story.

Document Vault

Lab reports and prescriptions parsed and organized automatically.

AI Assistant

Ask questions in plain language, get grounded, personal answers.

Appointment Companion

Prep questions, capture notes, and get a summary after every visit.

Health Insights

Trends and AI observations surfaced from your own history.

Secure & Private

Encrypted storage and row-level access, built in from day one.

AI Assistant

Grounded answers, built on your real health history.

When Adam asks "what did my last lab result mean?", Rihla+ pulls the relevant timeline entries and documents as context, sends a grounded prompt to the model, and returns a plain-language summary — never a generic answer detached from his actual history.

Appointment Companion

Walk in prepared. Walk out with a plan.

Book Appointment

AI Prep Questions

Live Voice Notes

Auto Summary

Follow-up Actions

Before the visit, Rihla+ suggests questions worth asking based on Adam's timeline. During the visit, it can capture voice notes. Afterward, it summarizes what was discussed and turns it into next steps — automatically added back to the timeline.

Health Insights

Patterns Adam would never spot on his own.

12

Migraine episodes
logged this year

-38%

Frequency after
new treatment plan

3

AI-flagged trends
worth discussing

Monthly Episode Trend

AI Observations

- Episodes trending down since March treatment change
- Flare-ups cluster on low-sleep weeks
- Consider discussing sleep hygiene at next visit

Technology Stack

A modern, production-grade foundation.

React

Component-driven UI

TypeScript

Type-safe application logic

Tailwind CSS

Design system styling

Supabase

Backend & authentication

PostgreSQL

Relational data store

OpenAI

AI reasoning & summaries

Lovable

Rapid iterative build

Security & Trust

Health data deserves more than best-effort protection.

Authentication

Secure sign-in with session management and token rotation.

Row-Level Security

Database-enforced access — patients only ever see their own data.

Secure Storage

Encrypted document storage for reports and prescriptions.

Privacy by Design

Minimal data collection, clear purpose for every field stored.

Responsible AI

Grounded, auditable prompts — no silent hallucinated advice.

Platform Architecture

A modular core, built to extend.

Beyond Healthcare

The same platform, reusable across any information-heavy journey.

Google Fit

FHIR Integration

Provider Portal

Mobile Apps

Case Study: PARR Framework

Problem · Approach · Result · Relevance

Problem

Patients lose critical context between appointments, leading to repeated tests and missed follow-through.

Approach

Design a single AI-guided timeline that ingests documents and conversations, then surfaces what matters.

Result

A working end-to-end prototype: timeline, document vault, AI assistant, and appointment companion.

Relevance

Directly addresses a universal pain point, with a platform pattern that extends well past healthcare.

Key Learnings

What building Rihla+ taught us.

Product Strategy

Scope ruthlessly around one core loop before adding breadth.

UX

Calm, minimal interfaces build more trust than feature density.

AI

Grounding beats cleverness — context quality drives answer quality.

Security

Privacy decisions are easiest when made at the schema level, early.

Healthcare

Patients don't want more data — they want less to remember.

Platform Thinking

Reusable modules turn one product into a defensible platform.
